

EXCHANGER CLEANING

Exchanger Cleaning Options

- Rotary Lancing
- Dual Rotary Lancing
- Single-Lance Tube Cleaning
- High-Pressure Water Blasting
- Chemical Cleaning

Whether you require industrial cleaning on an exchanger in a power plant, refinery, petrochemical plant or in a pulp and paper mill, Vertex can effectively and economically clean your exchanger for peak performance. Our cleaning technologies allow cleaning of both horizontal and vertical exchangers in straight or u-tube bundle configurations. Vertex provides both shell side and tube side exchanger cleaning and offers a wide range of high pressure water blasting technology to ensure bundles are thoroughly cleaned inside and out.

Keeping plant equipment clear of debris and deposits is essential to maintaining efficiency and reducing operating costs. With a team of trained industrial cleaning professionals, Vertex ensures deposits and other residues that reduce the efficiency of your exchanger will be removed safely and efficiently. With the ability to clean bundles on-site, our team works closely with operations to develop lockouts that optimize the cleaning process.
