

INDOOR AIR QUALITY MONITORING

No matter the work environment, all workers can be exposed to a multitude of harmful agents in the workplace. Through indoor air quality (IAQ) monitoring, you can mitigate the exposure to chemical, physical or biological hazards which can arise from pre-existing conditions, materials handled, work processes and practices. Vertex's team of professionals has the ability to investigate, test and correct IAQ issues that can lead to building related disease or sick building syndrome.

- Skin Irritation
- Headaches
- Dizziness
- Nausea
- Fatigue
- Difficulty Concentrating
- Sinus Problems
- Congestion
- Eye Irritation
- Nose and Mouth Irritation

*Symptoms are noticeable after several hours of work and typically improve or disappear when the worker leaves the building.

IAQ Services Include Testing For:

- Airborne Particulates
- Carbon Monoxide
- Carbon Dioxide
- Hydrogen Sulfide (H₂S)
- Relative Humidity
- Temperature
- Silica
- Mould
- Volatile Organic Compounds (VOCs)
- Light
- Alkali (Caustics)
- Noise
- Bacteria
- Asbestos
- Lead
- Airborne Fibres

Vertex also performs:

- Occupant Exposure
- Worker Exposure
- Risk Assessments
- Management Program Development
- Health Walk-Through Assessment
