

VACUUM SERVICES

An essential tool for successful waste management, Vertex's combo/vacuum trucks collect and transport (wet or dry) hazardous and non-hazardous materials. These vacuum trucks are ideal for spill response, fluid transfers, tank cleaning, service rig work and facility turnarounds.

With high pressure wash/steam units installed, these vacuum trucks become the perfect solution for a wide array of maintenance challenges including clearing hydrated product lines, cleaning compressor buildings and tank, and environmental cleanup.

At Vertex, we specialize in plant turnarounds. We have the equipment to support all sizes of projects, and the experienced operators and supervisors to ensure the job is done safe, cost effective and on time.
