

HYDRO-VAC

The challenges associated with uncovering vital infrastructure pose significant risk to the health and safety of your work force. Whether it be a facility turnaround or a new project, Vertex has the equipment and operators needed to support all sizes of projects.

Vertex's hydro-vac trucks use a combination of water blasting and vacuum power, which can be utilized year-round with on-board heaters, to become the perfect solution for non-destructive excavating of sensitive infrastructure. With an overhead boom to maneuver the hydro-vac hose, our hydro-vac trucks are ideal for reaching hard to reach locations in congested urban areas, facilities and around high pressure pipelines.

Capable of creating an excavation area as narrow as 3" wide, our clients benefit from the reduced environmental liability and potential restoration costs associated with their projects.

Services

- Daylighting (Potholing)
- Trenching
- Pole, Piling & Test Holes
- Service Repair Pits
- Debris Removal
- Tank Clean Outs
- Culvert Clean Outs
- Shoring Installations
