

ASSESSMENT & REMEDIATION

Finding cost effective solutions for our clients through site assessments, remediation program design, innovation in the field or risk management processes, our assessment and remediation team provides technical expertise and project management services to ensure you meet regulatory requirements and your project goals. With highly skilled agrologists, hydro-geologists, geologists, foresters, geophysicists, engineers, scientists and other technical specialists, Vertex has the knowledge and experience to manage environmental remediation projects and reduce environmental liabilities on sites across North America.

With a dedicated geomatics department, utilizing the latest spatial data technology, we are able to process data for reports and presentations in a comprehensible and user-friendly method while maintaining data integrity.

Services
