

DRILLING & WELL SERVICES

Vertex's drilling and well services team provides solutions that meet the highest level of regulatory compliance while keeping the most cost-effective and efficient disposal and monitoring operations in mind. Working closely with regulators, researchers, laboratories and drilling fluid groups, we create detailed drilling waste treatment and disposal plans to achieve all program goals.

Vertex's gas migration (GM) and surface casing vent flow (SCVF) testing uses the latest technologies including infrared methane detection and digital pressure / temperature logging to ensure accurate test results and compliance with regulatory requirements. We are capable of completing GM assessments year round due to the non-intrusive technology we use. Vertex is able to perform intrusive testing as well based on specific government regulation or client preference. Vertex takes great care to differentiate between true gas migration responses and false positives due to soil contamination or ambient interference such as wellhead leak.

Services

- Drilling Waste Management
- Surface Casing Vent Flow (SCVF) Testing
- Gas Migration Assessments

An expert in all applicable directives (including ERCB Directive 20, 079 and Directive 050), regulations and industry recommended practices, Vertex is able to ensure your project is completed on time and on budget.
