

GEOMATICS

The role of the geomatics team at Vertex is to provide expertise in all aspects of geographic information systems (GIS), computer-aided drafting (CAD) and GPS applications. Our personnel have a comprehensive background and skills in the latest spatial data technology to support a variety of environmental and engineering consulting initiatives.

Geomatics Support also includes project management to coordinate and distribute datasets to clients and subcontractors, as well as asset and document management.

Services

- Soils, Vegetation, Land Suitability, Groundwater, Land Use & Reclamation Thematic Mapping
