

ON-SITE RESCUE

Vertex first responder rescue teams are trained to provide the best possible care in the event that rescue services are required. Always alert and on stand-by, with all relevant pre-plans and permits, our personnel have the technical training, experience and expertise to perform safe and efficient rescues.

Our rescue professionals work with your team to identify risks including chemical, atmospheric and physiological hazards that make continuous work and rescue operations challenging. This approach ensures that those working in these environments with unique and complex risks are able to do so in a safe manner.

Services

- High Angle Rescue - our professional high angle rescue teams have all necessary training, technical rope skills and expertise to perform rescues and provide relevant planning to help you complete high angle projects safely.
- Confined Space Rescue - in many cases, rescuers must enter the confined space and package the patient for retrieval. This makes it incredibly important to have trained professionals on-site to perform the necessary rescue, pre-entry and hazard assessments on all confined spaces.
- Vehicle Rescue
- Water Rescue
