

SURFACE CASING VENT FLOW & GAS MIGRATION

Capable of performing both intrusive and non-intrusive gas migration (GM) assessments, Vertex provides prompt, accurate and cost effective assessments around wellheads prior to the cut and capping process

Services

Why Test For SCVF & GM?

- Mandatory Within 30 - 90 Days Of A Rig Release in Gas Migration Problem Areas (Alberta Directive 20)
- Mandatory On All Well Abandonments In Saskatchewan
- Mandatory On Wells Without Surface Casing

Vertex Can Benefit Your Project By:

- Understanding what constitutes a serious flow and can test producing, new drills and abandonments.
- Understanding how to differentiate between true gas migration and false positives due to soil contamination or ambient interference.
- Managing large SCVF & GM programs, ensuring testing stays in front of service rigs.
- Integrating other environmental services so that well testing, abandonment and reclamation certification can be done.
