

RECLAMATION

Vertex's diverse team of reclamation specialists have extensive experience and knowledge reclaiming many different type of disturbances such as conventional and in-situ wellsites, facilities, oil sands mines, coal mines, pipelines, roads, pits and spills. Our reclamation team are experts in developing, implementing and monitoring reclamation programs for all types of industry, for a wide range of different ecosystems such as peatlands, forests, cultivates land and native grasslands.

From the planning state to site certification we can manage all technical and project requirements of the reclamation process. With close working relationships with regulatory agencies; Vertex can ensure a streamline and effective approach to reclamation certification.
