

SPILL BERMS

Ideal for spill response and secondary containment, Vertex's spill berms with composite fabric liners are used to minimize and prevent potential environmental damage in the event that a spill occurs. By containing and preventing the spread of the leaked substance, our clients save time and resources during the cleaning process.

With a team of spill response and remediation experts, Vertex is capable of responding to the spill with in-house equipment that ensures any costs and delays that can be incurred by engaging third party contractors are avoided. Once the initial spill response is completed, Vertex has a wealth of experience managing remediation projects under many different regulatory bodies to address a variety of contaminants in a cost effective and efficient manner.
