

NOISE BARRIERS

Vertex noise barrier systems provide excellent noise reduction performance with a variety of installation options and aesthetic details. Vertex offers a wide range of standardized systems with the ability to offer design support and customization of the barrier to meet your needs. Our barriers provide both transmission loss (noise blocking) and absorption (noise reduction) properties to reduce noise impact while also acting as a visual screen.

Vertex's barriers can be panelized for quick installation or built in place to adapt to complex shape requirements. They can be installed as a free-standing system or on an existing support structure. Our barriers are self-draining and durable for permanent installations. They are designed for ease of installation and removal if necessary when the project is complete.

Noise Barrier Applications

- Refineries
- Power Plant Noise Compliance Barriers
- Compressor Stations
- LNG Facilities
- Manufacturing Facilities
- Temporary Construction Noise Barriers
- Transportation Noise Barriers Including Highway/Freeway, Loading Docks & Rail.
- Electrical Sub-Stations, Transformers
- Rooftop HVAC Equipment

Prefabricated Panels are Available in a Variety of Sizes and Colors:

- Panels 5' to 24' Long
- Panels 20" to 36" Wide
- Full Range of Sound Transmission & Absorption Performance Available
- Powder Coated or Galvanized Metal Surfaces
- Variety of Color Options
