

FLUID STORAGE & SECONDARY CONTAINMENT

Fully enclosed, our fluid storage solutions provide clients with additional environmental safety and regulatory security. With our unique 1000 barrel (BBL) insulated frac tanks, Vertex provides clients with an efficient solution to their large volume fluid storage needs and an opportunity to save up to 75% on their heating costs.

Vertex's fluid storage tanks are safer and faster to setup and occupy up to 70% less lease space than other traditional fluid storage techniques.

Equipment

Tanks	Configurations
1000 Barrel (BBL) (160 m ³)	Single or Double Walled Flat or Sloped Floors
400 BBL Tanks	Sweet or Sour Service Internal Piping Options
Acid Tanks	Corrosion Resistant Internal Epoxy Coating
Fuel Tanks	Internal or External Valve Containment Chambers
Potable Water Storage Tanks	Spray Insulation for Extreme Temperature Fluctuations
Sewage Containment Tanks	Various Heating Options Available

Containment

- All aspects of design, installation and management of secondary containment systems adhering to or exceeding government and regulatory guidelines.

Spill Berms

- All aspects of design, installation and management of secondary containment systems adhering to or exceeding government and regulatory guidelines.

Matting

- 8' x 40' Rig Mats (3 and 4 Beam)
- 8' x 20' Rig Mats (3 Beam)
- Access Matting
- Stair Crossings
