

TELECOMMUNICATIONS

With a comprehensive understanding of the different regulatory requirements in each jurisdiction, from municipal to federal, we work hard to ensure regulatory compliance. When site acquisition can provide a competitive advantage, you can trust Vertex to provide proper due diligence so that you can achieve your land use goals.

From vertical and roof-top real estate installations in urban centers to rural site green field acquisitions for telecommunications towers, Vertex works closely with our clients to negotiate land use solutions that consider all variables: technical challenges, aesthetic issues and infrastructure practicality.

As the Telecommunications industry aligns with fifth generation (5G) Networks, Vertex aims to ensure our client feels confident in the execution of their wireless and wireline build-out goals.
