

# Removable Insulation Blankets, Utilidor & Tracer Wrap

## Removable Insulation Blankets

Our custom removable insulation blankets are designed to fit the most difficult to insulate areas that require thermal temperature control and protection. Utilized to protect both infrastructure and your personnel, Acden Vertex's blankets can be easily installed by your team or ours and reordered as required with our unique blanket ID tag system.

As our minimum, Acden Vertex has adopted PIP INSR 1000 Guidelines. This standard is one of the most comprehensive industry approved guidelines which enables us to ensure the accuracy and fit of our blankets.

### Typical Uses for Removable Insulation Blankets

Include Insulating:

- Piping
- Vessels
- Tanks
- Flanges
- Pumps
- Valves
- Tubing Ducts
- Fittings
- Exhausts

## Acoustic Blankets and Curtains

Our blankets and curtains use mass loaded vinyl to block noise transmission and acoustically absorptive materials to attenuate reflected sound. Applications include: exhaust covers, enclosures and barriers, machine covers, suspended baffles and partition walls/entrances.

## Utilidor

Ideal for insulating a group of piping as a single unit rather than insulating each line separately, Acden Vertex's utilidor is a cost-effective solution for heat loss, energy efficiency and the protection of piping and equipment. In addition to providing insulating properties, our utilidor offers service access to valves and instrumentation, and can be reused and reconfigured to meet client needs.

Utilidor Applications Include:

- Pipe Rack
- Buildings
- Boxes & Enclosures

## Tracer Wrap

A cost-effective means for insulating pipe, Acden Vertex supplies Tracer Wrap / Pipe Wrap in most standard pipe and tubing sizes using E-glass, Pyrogel XT (Aerogel), or closed-cell foam rubber insulation.
