

WET GAS SCRUBBER

Vertex wet gas scrubbers aid in the elimination of hydrocarbon emissions during facility shutdowns and turnarounds. Our scrubbing fluid is a reliable and industry-proven chemistry that will absorb a broad range of hydrocarbon molecules with high efficiency while providing a safe and economical solution for H₂S control. This type of gas scrubbing is the preferred way to control a wide range of gaseous pollutants from water-soluble organic compounds to ensure a safe work area.

At Vertex, our high-efficiency wet gas scrubber units offer low energy consumption and the ability to integrate seamlessly with your operations, serving a variety of applications to suit your needs all year-round.

Applications

- Removal of H₂S
- Neutralize corrosive gases
- Emission & Air Pollutant Treatment
- Aids in vacuum truck, tank truck venting, and process equipment cleaning
- Crude oil rail loading emission control
- Mitigates toxic emissions from production tank venting

Features

- Easily transportable for all turnaround/shutdown requirements
- 95-99% Removal Efficiency Rate
