

# TANK HAULING, DELIVERY & SETUP

Taking a total project management approach throughout the lifecycle of your project, Vertex considers logistics, mitigation, remediation and preemptive environmental controls during the setup and take down of your temporary tank farm. Utilizing our well maintained fleet of trucks, transport and pilot vehicles, Vertex ensures the proper setup and tear down of fluid containment equipment and matting in a safe and efficient manner.

When appropriate, Vertex can utilize innovative equipment such as hydraulic tank cradle equipment that remove the need for pickers to set tanks in certain situations. This approach to tank hauling, delivery and setup saves our clients both time and resources.

## Services

- Site Mapping & Tank Farm Design
- Route Planning
- Logistics (Road Bans, Permits etc.)
- Site Preparation
- Tank Hauling & Setup (Utilizing a Company Maintained Fleet of Tank Cradle Trailers & Pilot Vehicles)
- Fluid Hauling
